CleanOpsStaff Enhancements of 9-29-2010

1. **Addition of Two New Cleaning Frequencies to support Six and Seven Day Work Week**: Many questions have come in regarding using ***CleanOpsStaff*** to support Six-Day, and Seven-Day work weeks. We have added ***Six Times Per Week (6/W)*** and ***Seven Times Per Week (7/W)*** as cleaning frequencies you can select when adjusting the Standard Room Matrix and well as when making a local category matrix. This will help support work loading and scheduling for organizations with weekend operations.

2. **Addition of Two New Cleaning Frequencies to Support Team Cleaning**: Many questions have come in regarding using ***CleanOpsStaff*** to support Team Cleaning. We have added ***Three Times Per Week (3/W)*** and ***Four Times Per Week (4/W)*** as cleaning frequencies you can select when adjusting the Standard Room Matrix and well as when making a local category matrix. This will help support the Team Cleaning optional approach of performing routine activities four times per week, while performing detail activities one time per week and project activities on Friday.

3. **Team Cleaning Mode for Projects, and Team Cleaning Mode for Routine added to the *ProScheduler*:** The ***ProScheduler*** has been enhanced to add additional support for team cleaning in its automatic scheduling feature. You can now set an option so that the ***ProScheduler*** will force all project activities to be scheduled for Friday during the automatic scheduling process. You can now also independently set an option so that the ***ProScheduler*** will force all weekly activities to be scheduled for Monday, Tuesday, Wednesday, or Thursday leaving Friday free for project activities.

4. **Days In Work Week Buttons Added to ProScheduler:** The ***ProScheduler*** has been enhanced three radio buttons that allow you to select a five-day, six-day, or seven-day work week. With the enhancement you can now use ProScheduler to help schedule weekend operation and/or to spread cleaning activities over five, six, or seven days

5. ***ProScheduler, CleanOpsStaff-ProLocal and ISSA 540 Cleaning Time* Coordination Issue Resolved**: In some instances an extra space was being inserted in the name of the cleaning task from the ISSA 540 Cleaning Time dropdown list when making a local category. This extra space caused an issue with the ProScheduler when attempting to schedule task with the extra space in its name. This issue is resolved in the latest release.
